DETAILED ACTION

The following action is in response to the election filed for application 10/715,995 on April 15, 2005.

Election/Restrictions

Claims 24-26 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected subcombination, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on April 15, 2005.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mark Ussai on June 7, 2005.

The application has been amended as follows:

claims 24-26 have been canceled.

Allowable Subject Matter

Claims 1-23 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art of record fails to show or render obvious the apparatus for selectively engaging one of a plurality of gears in a transmission, and particularly including a first shift finger mounted on a drive shaft so as to be rotatable therewith and pivotable with respect to the drive shaft; wherein the first shift finger is pivotable in a first position so as to engaged a first shift rail, and to a second position where it engaged a second limb of a first bell crank lever which is connected to a first limb that is permanently engaged to a second shift rail, and including the remaining structure of claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Behr, Long, and Takemura have been cited to show similar transmission actuators.
